

JSON File for Rules

📅 Date July 20, 2026 → July 22, 2026

▼ Enabling all free sources on suricata

Ran these commands to add all sources from index.yaml and enable all free sources from there so we can check etc. how many free sources etc.

```
us@ubuntu:~$ sudo suricata-update list-enabled-sources
20/7/2026 -- 09:36:23 - <Info> -- Using data-directory /var/lib/suricata.
20/7/2026 -- 09:36:23 - <Info> -- Using Suricata configuration /etc/suricata/suricata.yaml
20/7/2026 -- 09:36:23 - <Info> -- Using /usr/share/suricata/rules for Suricata provided rules.
20/7/2026 -- 09:36:23 - <Info> -- Found Suricata version 8.0.6 at /usr/bin/suricata.
20/7/2026 -- 09:36:23 - <Warning> -- No enabled sources.
us@ubuntu:~$ ^C
us@ubuntu:~$ sudo suricata-update update-sources
20/7/2026 -- 09:38:24 - <Info> -- Using data-directory /var/lib/suricata.
20/7/2026 -- 09:38:24 - <Info> -- Using Suricata configuration /etc/suricata/suricata.yaml
20/7/2026 -- 09:38:24 - <Info> -- Using /usr/share/suricata/rules for Suricata provided rules.
20/7/2026 -- 09:38:24 - <Info> -- Found Suricata version 8.0.6 at /usr/bin/suricata.
20/7/2026 -- 09:38:24 - <Info> -- Downloading https://www.openinfosecfoundation.org/rules/index.yaml
20/7/2026 -- 09:38:26 - <Info> -- No change in sources
20/7/2026 -- 09:38:26 - <Info> -- Saved /var/lib/suricata/update/cache/index.yaml
us@ubuntu:~$ sudo suricata-update list-sources --free
```

```
us@ubuntu:~$ sudo suricata-update list-sources --free
20/7/2026 -- 09:38:32 - <Info> -- Using data-directory /var/lib/suricata.
20/7/2026 -- 09:38:32 - <Info> -- Using Suricata configuration /etc/suricata/suricata.yaml
20/7/2026 -- 09:38:32 - <Info> -- Using /usr/share/suricata/rules for Suricata provided rules.
20/7/2026 -- 09:38:32 - <Info> -- Found Suricata version 8.0.6 at /usr/bin/suricata.
Name: et/open
  Vendor: Proofpoint
  Summary: Emerging Threats Open Ruleset
  License: MIT
Name: oisf/trafficid
  Vendor: OISF
  Summary: Suricata Traffic ID ruleset
  License: MIT
Name: abuse.ch/sslbl-blacklist
  Vendor: Abuse.ch

▼ All free sources from index.yaml & details:

1. **et/open (Emerging Threats Open):** A broad, community-driven ruleset maintained by Proofpoint that detects malware families, exploit kits, C2 infrastructure, and suspicious activity.
2. **ptrules/open (Positive Technologies):** Focuses on network-level detection of CVE exploits, zero-day proofs-of-concept, and known threat actor tactics, techniques, and procedures (TTPs).
3. **abuse.ch/urlhaus :** Identifies network traffic contacting malicious URLs actively used to distribute malware payload files.
4. **abuse.ch/feodotracker :** Contains IP and port indicators for active botnet Command and Control (C2) servers managed by malware families like Dridex, TrickBot, and QakBot.
5. **abuse.ch/sslbl-blacklist :** Blocks or detects encrypted network traffic associated with malicious SSL/TLS certificates used by malware infrastructure.
6. **abuse.ch/sslbl-ja3 :** Detects malicious SSL/TLS connections using JA3 client fingerprints linked to malware frameworks and botnets.
7. **stamus/lateral :** Designed specifically by Stamus Networks to detect internal lateral movement tactics within Microsoft Windows environments.
8. **tgreen/hunting :** A set of experimental, heuristic rules tailored for threat hunting and detecting subtle network anomalies rather than standard signature matches.
9. **ipfire/dbl :** A domain blocklist designed to flag traffic heading to malicious, phishing, or unwanted domains.
10. **julioliraup/antiphishing :** A collection of rules targeting phishing domains and credential-harvesting websites compiled from open-source intelligence.
11. **the-hunters-ledger/open :** Threat intelligence signatures created from active investigations into malware campaigns and exposed open directories.
12. **pawpatrules :** A general-purpose community ruleset covering vulnerable software, suspicious network flows, and bad security practices.

13. `aleksibovellan/nmap` : Specifically targets network reconnaissance by identifying packet characteristics, window sizes, and timing signatures unique to Nmap scans.
14. `etnetera/aggressive` : An IP-based blacklist targeting aggressive or abusive external IP addresses observed performing network probing.
15. `oisf/trafficid` : Maintained by the Open Information Security Foundation to classify general protocols and application traffic rather than specific attacks.

Terminal Abbreviation	Rule Source / Provider	Description Match
ET (50,755)	<code>et/open</code>	Emerging Threats Open
URLhaus (30,210)	<code>abuse.ch/urlhaus</code>	abuse.ch URLhaus
AT (22,330)	<code>julioliraup/antiphishing</code>	AntiPhishing rules
 (box symbol) (21,464)	<code>pawpatrules</code>	PawPatRules (uses a paw emoji in its rule <code>msg</code> header)
SSLBL: (10,287)	<code>abuse.ch/sslbl-blacklist</code> & <code>sslbl-ja3</code>	SSL Blacklist & JA3 fingerprints combined
Stamus (546)	<code>stamus/lateral</code>	Stamus Networks lateral movement
SURICATA / GPL (409 / 915)	<code>oisf/trafficid</code> & legacy rules	Open Information Security Foundation traffic identification & standard rulesets
TGI (255)	<code>tgreen/hunting</code>	TGreen Threat Intelligence / Hunting
THL (66)	<code>the-hunters-ledger/open</code>	The Hunter's Ledger
IPFire (56)	<code>ipfire/dbl</code>	IPFire Domain Blocklist
ETN (16)	<code>etnetera/aggressive</code>	Etnetera Aggressive IP list
POSSBL (10)	<code>ptrules/open</code>	Positive Technologies rules
Feodo (5)	<code>abuse.ch/feodotracker</code>	abuse.ch Feodo Tracker
